Content

Foreword	9
Argument	15
Cap. I. A strategic step backwards	
I.1. Antithetics of pure reason – the glowing core of <i>Criticism</i> . Strategic retreat into the <i>transcendental</i> . The necessity of discovering a <i>transcendental topic</i> and a <i>discipline of pure reason</i>	27
I.2. The cardinals of reason and their possible ontological significance	33
Cap. II. In the interests of peace	
II.1. A conflict of interest and a compromise solution. Replacing "transcendent censorship" with <i>transcendental self-censorship</i> . The constitution of a critical system of pure reason as a system of perspectives pacification	39
II.2. Transcendental idealism instead of empirical idealism. The argument from totality instead of majority. Practical success instead of pragmatic success. "Titanic-vals"	47
II.3. Metaphysical certainty instead of empirical certainty. Metaphysical homologation instead of public homologation. Truth-consistency – prototype of truth-coherence.	55
II.4 Pragmatic truth, moral competence and legal competence. Metaphysics in the service of peace.	63
II.5. Redefining metaphysics as the science of its own possibility	69
II.6. Ethical reconstruction of nature. Kant's encounter with Socrates.	72

II.7. A "system of circumspection" – a reconciling bridge between <i>being</i> and <i>beingness</i> . Technology and morality – two orthogonally conjugated perspectives of <i>being</i>	80
---	----

Cap. III. Towards a new paradigm of science

III.1. From <i>predicate-tree</i> to <i>ramified type-theory</i> : same problem – same solution.	88
III.2. "Empirical" confirmation of Kantian transcendental idealism: non-Euclidean geometries, quantum mechanics and relativity theory.	92
§ The Copernican revolution of Lobachevsky, Bolyai and Gauss.	92
§ 2. Short intermezzo on a similar theme in the philosophy of culture.	105
§ 3. The dilemma of classical geometry and the transcendental solution of modern geometry.....	109
§ 4. Einstein's Copernican Revolution	116
§ 5. The Copernican revolution of quantum mechanics ...	125
III.3. The constitutive relativity of experience and Kant's unfinished project.	128
Adaus	137

Cap. IV. In search of a well-assured certainty

IV.1. How is it possible to know from the inside what is found outside? How is <i>the transcendent</i> possible?	140
IV.2. Our transcendental myopia and overcoming it by recognizing and rationally integrating its constitutive uncertainty into an antinomic system of the possible world (experience). Escape from illusion through recognition of illusion.	149
IV.3. Ontological surprise – the essence of any possible object as <i>Gegenstand</i>	153

Cap. V. The blind paradigm

V.1. Kant's man – Cheselden's blind man.	165
V.2. Empirical deception. The impossibility of evidence. The <i>paraconsistent</i> reawakening of metaphysics after the <i>consistent</i> dogmatic sleep of reason. The rational foundations of faith and morality	173

Cap. VI. The Dilemma and Method of Metaphysics

VI.1. The dilemma of metaphysics – Gödel's dilemma. Transcendental logic – an "applied logic" of <i>paraconsistency</i> . The paradigmatic unity of <i>Criticism</i> and modern foundational research.	179
VI.2. The mole's dilemma. Metaphysics – the <i>a priori</i> model of a <i>possible</i> reunified theory of nature. Ontological antinomy.	185
VI.3. The perspective of a divine intellect – norm and ideal of an absolute possible certainty.	193
VI.4. Recognizing the transcendental illusion and overcoming it by overturning the historical-psychological perspective on knowledge. Transcendental logic – the last possibility to save metaphysics.	196
VI.5 Towards a future system of <i>metaphysics</i> within the limits of science. Transcendental methodology, the science of uncertainty and the spatialization (geometrization) of thought.	202
